# How to Install Virgin Media WiFi Pods?

Follow the given steps carefully, in the given order:

- Make sure your Virgin Media Hub is operating properly. The Pods need it.
- Now, visit the Virgin router login interface via “192.168.0.1” on your computer to check all the settings required for the pod setup.

- Plug the Pod directly into a wall outlet. Avoid using an extension cord.

- Wait a minute; the lights will flicker while it connects. Don't pull it out yet.
- Use the Virgin Media Connect app to connect the Pod and see whether it's in a good place.

- Check the WiFi in the area by walking with your phone. Pod is doing its job if the speed is improved.

Sometimes they connect right away. Don't worry! If it doesn't turn green straight away.

It might take a few minutes sometimes.

# THANK YOU
